Executive Summary

Desklabs should no longer be marketed as a travel-only CRM. The stronger and more scalable category is a **customer operations platform for modern service businesses**: one calm workspace connecting communication, CRM, operational workflows, finance, automation, and human-controlled AI.

Travel remains the beachhead market because the product has real operational knowledge and proof there. The homepage, however, represents the platform. Industry pages translate the same platform core into the language and lifecycle of Travel, Education, Healthcare, Property, and Agency/Professional Services.

The supplied reference is strategically useful because it demonstrates product-led storytelling, clean section rhythm, restrained motion, white space, and an effective progression from category promise to industry relevance, pain recognition, platform explanation, proof, and CTA. Desklabs should adopt those principles while creating original copy, product scenes, assets, visual identity, and motion choreography.

Recommended category statement

Desklabs is the customer operations platform for modern service businesses.

Recommended homepage promise

Satukan seluruh operasional pelanggan dalam satu workspace.

Recommended English promise

Run your entire customer operation from one calm workspace.

Non-negotiable principles

Product visuals do most of the selling.

The homepage remains horizontal; industries receive dedicated pages.

Every section communicates one idea.

AI is human-in-the-loop and contextual.

No unsupported product, customer, security, or performance claims.

Marketing motion is calm and explanatory.

The website must feel like the same brand as the Calm Workspace application.

1. Strategic Foundation

1.1 The market decision

The user request changes Desklabs from a vertical product into a platform business. That is strategically attractive but introduces a real risk: a website that claims to serve everyone can feel relevant to no one. The solution is not to list more industries in the hero. The solution is a **platform core + vertical operating templates** model.

One platform. Vertical operating templates.

A shared customer operations core with industry-specific workflows.

Platform architecture

The shared platform core contains:

Communication

CRM

Operations engine

Finance

Automation

Aurora AI

Analytics and permissions

Each industry changes the lifecycle, nouns, data templates, automation recipes, and product proof. The homepage sells the shared value. Industry pages sell relevance.

1.2 Beachhead versus identity

Travel is the beachhead, not the permanent brand boundary. Travel should remain the first industry page, the source of initial customer stories, and a primary visual dataset during launch. It should not dominate the global headline, navigation, or core product architecture.

1.3 Ideal customer profile

Initial horizontal ICP:

Service businesses with 5-100 employees

High volume of inbound customer conversations

Multi-step sales or service lifecycle

Operations currently coordinated through personal messaging accounts and spreadsheets

Need for handoff between sales, operations, finance, or service teams

Strong need for follow-up discipline and customer context

Avoid targeting every small business category. Product-market fit is strongest where communication leads into a structured operational workflow.

1.4 Jobs to be done

When customer conversations arrive through many channels, teams need one place to understand the customer, decide ownership, and respond without losing context.

When a lead moves into service delivery, teams need the conversation, workflow, documents, payment, and activity history to remain connected.

When managers need visibility, they need operational truth rather than reports reconstructed from personal chats and spreadsheets.

When AI is introduced, teams need it to use real context and remain under human control.

1.5 Differentiation

Desklabs is not merely:

a helpdesk

a generic CRM

an AI chatbot

a project manager

a finance application

The differentiation is the connected operating model: the same customer context continues from conversation into the industry workflow and commercial outcome.

1.6 Strategic risks

Risk: horizontal dilution

Mitigation: homepage sells universal customer-operations problems; industry pages carry specific workflows and proof.

Risk: overclaiming product breadth

Mitigation: only show live capabilities or label roadmap clearly. The website should not outrun the product.

Risk: healthcare compliance exposure

Mitigation: position healthcare around non-clinical communication and coordination until privacy, security, legal, and clinical boundaries are formally established.

Risk: visual imitation

Mitigation: copy reference principles, not protected expression. Produce original UI scenes and animation.

2. Positioning and Messaging System

2.1 Messaging hierarchy

Category

Customer Operations Platform.

Audience

Modern service businesses.

Functional promise

Communication, CRM, operations, payments, automation, and AI in one workspace.

Emotional promise

Work feels calmer. Customer service feels more consistent. Teams lose less context.

Proof mechanism

Show real product workflows and credible customer outcomes.

2.2 Voice and tone

Desklabs should sound:

clear, not inflated

confident, not aggressive

intelligent, not technical for its own sake

modern, not trendy

helpful, not robotic

specific, not crowded with features

Avoid:

“revolutionary”

“game-changing”

“all-in-one” without explanation

“AI-powered” repeated in every section
claims of replacing the whole team
enterprise jargon without operational meaning

2.3 Language recommendation

Use Indonesian as the default launch language because the strongest immediate market and sales motion are Indonesian. Publish a professionally edited English version for regional credibility and future expansion. Do not mix languages randomly; retain only familiar product terms such as CRM, workflow, AI, and workspace.

2.4 Full copy system

The complete recommended copy is included in 02_Homepage_Copy_Deck.md. It should be treated as a copy foundation, then refined against actual product capabilities and commercial packaging before launch.

3. Website Objectives and Measurement

3.1 Primary objectives

Establish a clear category and scalable positioning.
Demonstrate the product before asking visitors to book a demo.
Route visitors into product or industry-specific narratives.
Create qualified trial and demo demand.
Build trust for a young product without fake proof.

3.2 Primary conversions

Start free
Book demo
Watch product demo
Visit industry page
View pricing

3.3 Success metrics

The primary measure is qualified pipeline or product activation, not raw form volume. Supporting website metrics include CTA click-through, demo-form completion, signup completion, industry-assisted conversion, product-demo engagement, and Core Web Vitals.

4. Information Architecture

The site architecture separates horizontal platform pages from vertical conversion pages.

Homepage narrative flow

Move visitors from recognition to confidence to action.

Homepage flow

4.1 Global navigation

Products

Solutions/Industries

Resources

Pricing

Login

Book Demo

Keep launch navigation simple. Do not expose empty pages to make the product look larger.

4.2 Core routes

See the detailed sitemap in 03_Information_Architecture_and_Wireframes.md.

4.3 Homepage narrative

The homepage progresses through:

Category promise

Trust signal

Industry recognition

Universal operational pain

Shared platform explanation

Product capability

Aurora AI

Workflow

Proof

Pricing and objections

Final action

5. Homepage Blueprint

5.1 Navigation

The navigation should remain visually quiet. A transparent or white initial state is acceptable; after scrolling, it becomes a white sticky header with a subtle border. The primary demo CTA is compact and does not dominate the hero.

5.2 Hero

Hero wireframe

Goal

Within eight seconds, visitors should understand what Desklabs is, who it is for, and why it matters.

Required content

Category eyebrow

One outcome-led headline

Two-sentence maximum supporting copy

Start Free and Watch/Book Demo

Product-led visual

Optional trust microcopy

Visual story

Use a desktop Desklabs workspace because the product is a work operating system. The scene should be neutral enough for multiple industries while showing concrete actions: a conversation, customer context, Aurora insight, and workflow change.

Motion

Use the storyboard below; play once and settle.

Hero motion storyboard

5.3 Trust

Never fabricate logos. If customer proof is limited, use an honest statement, partner/integration categories, and later replace them with approved customer logos and quantified outcomes.

5.4 Industries

The five industry cards communicate that Desklabs understands different operating lifecycles without changing the shared platform story. Travel should be first at launch because it has the strongest product authenticity, not because it defines the platform.

5.5 Problems

Use four alternating product stories:

Scattered conversations

Fragmented customer data

Missed follow-up

Disconnected operations

Each story has one visual problem, one consequence, and one resolved product state.

5.6 Platform core

This is the strategic bridge between horizontal positioning and vertical relevance. Show that the same communication, CRM, operations, finance, automation, and AI core can load different operating templates.

5.7 Product modules

Present six modules. Limit each module to an outcome statement and one product scene. Detailed capability lists belong on product pages.

5.8 Omnichannel and integrations

Show channels in the context of a customer record, not as a decorative logo cloud. Separate live integrations from planned ones.

5.9 Aurora AI

Aurora must be demonstrated as a controlled assistant. The website should show sources, reasoning cues where appropriate, confidence carefully, and explicit human approval.

5.10 How it works

The flow is universal:

Connect → Understand → Operate → Assist → Improve.

Industry pages replace it with a specific lifecycle.

5.11 Proof

Strong proof options, in priority order:

Real quantified customer outcomes

Customer story with implementation detail

Real product usage or operational volume

Founder/customer interview evidence

Technology or partner ecosystem

Do not publish invented percentages.

5.12 Pricing

Pricing should communicate how the product scales. The likely commercial dimensions are seats, channels, automation volume, AI usage, and vertical modules. Final cards must reflect actual packaging.

5.13 FAQ

Answer integration support, onboarding, migration, AI control, security, industry fit, pricing, and support.

5.14 Final CTA and footer

Repeat the two primary actions. The footer should remain compact and include trust/legal pages before enterprise outreach.

6. Industry Page System

Industry page framework

One reusable conversion architecture; industry-specific language, workflows, and proof.

Industry page framework

The detailed pages for Travel, Education, Healthcare, Property, and Agency are specified in 06_Industry_Page_Frameworks.md.

6.1 Core rule

Do not simply replace nouns in the same copy. Each page must use a real lifecycle, specific pains, relevant modules, realistic product visuals, industry objections, and safe claims.

6.2 Launch order

Travel

Agency

Education

Property

Healthcare after compliance/product readiness

7. Visual Design System

Marketing visual system

Distinct from the product UI, but recognizably Desklabs.

Type scale

Display

Desklabs makes customer operations feel lighter.

H1

Desklabs makes customer operations feel lighter.

H2

Desklabs makes customer operations feel lighter.

H3

Desklabs makes customer operations feel lighter.

Body

Desklabs makes customer operations feel lighter.

Small

Desklabs makes customer operations feel lighter.

Radius

12px

16px

20px

28px

Marketing visual system

7.1 Brand direction

The application is a Calm Workspace. The marketing site can use more expressive composition and subtle glows, but must retain the same sense of clarity and control.

Core palette

Brand Blue for trust and platform identity

Aurora Violet for intelligence and automation

Cyan for connected motion and highlights

Emerald for positive operational states

Neutral ink and off-white surfaces for most of the page

Do not adopt the reference's exact purple identity.

7.2 Typography

Recommended families: Geist, Inter, or a comparably neutral variable sans. Use a single family at launch. Headlines depend on weight, tracking, and line break quality rather than a novelty font.

Display: 64-72 desktop

H1: 56-64

H2: 40-48

H3: 26-30

Body large: 18

Body: 16

Small: 14

Caption: 12

Mobile sizes use fluid clamp values.

7.3 Spacing and layout

Maximum content width: 1240px

Desktop gutter: 32px

Tablet gutter: 24px

Mobile gutter: 20px

Standard desktop section spacing: 112-128px

Mobile section spacing: 64-80px

7.4 Radius, border, and shadow

Marketing may use larger radius and softer shadow than the application, but consistency is required. Use radius 12/16/20/28. Borders stay at 6-9% black opacity. Shadows are wide and low-opacity, never the main separator.

7.5 Gradients

Gradients are reserved for:

hero atmosphere

one platform/AI narrative transition

final CTA

Do not apply gradient backgrounds to every card.

8. Motion System

The complete specification is in 04_Motion_and_Interaction_Spec.md.

8.1 Principle

Motion must explain what changed and how different parts of the customer operation connect.

8.2 Reduced motion

Reduced-motion is a full design state, not a technical afterthought. Every product sequence must have a clear static final composition.

8.3 Performance

Prefer DOM/SVG, transforms, and opacity. WebGL is not required for the approved direction.

9. Visual Asset System

The complete production brief is in 05_Visual_Asset_Production_Brief.md.

9.1 Required asset priority

Hero product scene

Hero floating callouts

Five industry card scenes

Four problem/solution scenes

Product module scenes

Aurora sequence

Proof/customer story visuals

Social and open-graph assets

9.2 Data realism

Use plausible, fictional records. Do not expose real customer data. Do not show a perfect “demo fantasy” where every workflow is complete; real operational states create credibility.

10. Content and SEO System

The full copy deck is included in 02_Homepage_Copy_Deck.md, while SEO, CMS, analytics, and experimentation are detailed in 07_SEO_CMS_Analytics.md.

10.1 Content principle

Lead with outcomes and workflow, then provide features as evidence. Avoid feature dumping.

10.2 SEO principle

Build topical authority across platform, product, industry, and problem pages. The homepage should not attempt to rank for every vertical-specific keyword.

11. CMS and Content Operations

The CMS manages copy, SEO, FAQs, industry pages, resources, and proof. Complex product animation configuration should remain in code unless an editor genuinely needs to change it.

The machine-readable suggested schema is in 12_cms_content_model.json.

12. Technical Implementation

The detailed architecture is in 08_Technical_Implementation_Plan.md.

12.1 Recommended approach

Build a strong static homepage first. Add complex motion only after content, layout, and responsiveness are approved. This avoids polishing animation around an unstable story.

12.2 Performance budget

LCP < 2.5s target

INP < 200ms target

CLS < 0.1

Static server-rendered hero first frame

Initial homepage transfer under 2MB where achievable

12.3 Localization

Indonesian default plus /en. Keep all text out of raster assets.

13. Analytics and Conversion

Track the full path from acquisition to qualified pipeline and activation. Do not judge the website only on demo-form count.

Primary events and experiments are listed in 07_SEO_CMS_Analytics.md.

14. Accessibility, Privacy, and Trust

Accessibility and reduced motion are design requirements. Privacy and trust pages are product-sales infrastructure, not footer formalities.

Healthcare requires a separate readiness review. Until then, keep all claims within approved non-clinical operations.

15. Delivery Roadmap

Phase 0 - Approval

Positioning

language strategy

homepage narrative

visual direction

claim inventory

Phase 1 - Foundations

Figma marketing system

Next.js marketing shell

tokens
navigation/footer
content model
analytics plan

Phase 2 - Static homepage

Implement and approve all sections without complex motion.

Phase 3 - Visual assets and motion

Hero, problem stories, platform diagram, Aurora sequence, responsive crops.

Phase 4 - Conversion routes

Demo, pricing, product pages, Travel page.

Phase 5 - Localization and vertical expansion

English, Agency, Education, Property, Healthcare when ready.

Phase 6 - Optimization

Proof, experiments, SEO resources, performance refinement.

16. Governance

16.1 Decision hierarchy

When tradeoffs occur, prioritize:

Accuracy and trust
Clear category story
Product understanding
Conversion
Visual novelty

16.2 Ownership

Founder/Product: positioning, product accuracy, roadmap claims
Marketing: copy, campaigns, proof, SEO
Design: visual system, assets, motion
Engineering: implementation, accessibility, performance
Security/Legal: privacy, claims, healthcare readiness

16.3 Change control

Major changes to hero positioning, page structure, visual system, or AI claims require a documented revision to this Bible. Small campaign experiments can run within approved guardrails.

17. Reference Analysis

The supplied reference demonstrates excellent product-led storytelling. Desklabs should adopt its clarity, rhythm, restrained motion, and visual proof while remaining original.

Supplied reference - internal analysis only

Use the narrative and motion principles; do not publish or copy the assets.

Reference analysis board

Internal extracted frames are included only for design analysis. They must not be published.

18. Final Recommendation

Build the website as a **marketing operating system**, not a single landing page. The homepage defines the platform. Product pages explain capabilities. Industry pages create relevance. Customer stories create proof. Resources build demand. A shared design and content system keeps the whole experience coherent as Desklabs expands beyond Travel.

The best immediate launch scope is:

Platform homepage

Travel industry page

Communication and CRM product pages

Pricing or qualified demo page

Indonesian default

English version shortly after

Do not delay launch for all five industry pages, but design the system so they can be added without redesigning the homepage.

Appendices

Appendix A - Package files

See 00_README.md for the complete artifact index.

Appendix B - Machine-readable assets

11_design_tokens.json

12_cms_content_model.json

13_marketing_tokens.css

15_Launch_Backlog.csv

Appendix C - Implementation prompts

Use 09_Cursor_Prompt_Pack.md one PR at a time. Do not generate the entire website in one Cursor run.

Appendix D - Launch gate

The final checklist is in 10_QA_and_Launch_Checklist.md.
